

DIANI DICKOVITA

Software Engineer | Full-Stack Development | Production Systems & Quality Engineering

0717371316 | dianianjalika2000@gmail.com | Colombo, Sri Lanka [linkedin/DianiDickovita](https://www.linkedin.com/in/DianiDickovita) | github.com/DianiDickovita

PROFESSIONAL SUMMARY

Software Engineer with 2.5+ years of hands-on experience independently delivering well-engineered code across the full software development lifecycle - from design and implementation through testing, deployment, and production support - for an enterprise platform serving 20+ corporate clients. Strong grounding in OOP/SOLID principles, common design patterns, and data structures & algorithms from university and applied daily in production code, along with RESTful API design and relational database design (MySQL). Writes unit tests and collaborates with QA on integration testing, and has foundational knowledge of secure programming, data-privacy concepts, and concurrency/parallel programming. Comfortable with Git-based version control, branching, and CI/CD workflows, and experienced conducting root cause analysis to independently resolve production issues (800+ incidents resolved to date). Uses AI coding assistants (e.g. GitHub Copilot, ChatGPT, Claude) regularly to support development, debugging, and documentation, while validating output before use. Familiar with monitoring, with some hands-on exposure to cloud-based deployment. Communicates clearly with cross-functional and stakeholder teams within Agile sprint ceremonies, and enjoys mentoring and sharing knowledge with junior engineers.

RELEVANT SKILLS

- Engineering Fundamentals: OOP & SOLID principles, common design patterns, data structures & algorithms, MVC architecture
- Secure & Concurrent Programming: Foundational secure programming and data-privacy concepts; basic concurrency/parallel programming concepts (university coursework and applied practice)
- Testing & Quality: Unit testing, QA collaboration, code reviews, root cause analysis
- Languages & Frameworks: PHP (Laravel), Java (Spring Boot), JavaScript, Vue.js, React.js
- Databases: MySQL - schema design, query optimization, indexing
- Delivery: Git/GitLab/GitHub version control & branching, GitLab CI/CD, Agile/Scrum
- AI-Assisted Development: Regular use of AI coding assistants (Copilot/ChatGPT/Claude) for code generation, debugging, and documentation, with careful validation of output

EDUCATION

Master of Computer Technology - University of Colombo School of Computing (UCSC) *(In Progress)*

Pursuing part-time alongside full-time work; coursework builds on software engineering and systems fundamentals.

BSc Information Systems - University of Colombo School of Computing (UCSC) | 2021 - 2024

Second Class Lower Division. Coursework: database systems, software engineering, systems analysis, computer networks, software project management.

Diploma in Information and Communication Technology (ICT) - ICBT Campus | 2020

Foundational studies in computing, programming fundamentals, networking, and digital systems.

RELEVANT PROJECTS

Band Artist Management System - Spring Boot · React.js · MySQL

- Architected a full-stack system end-to-end, applying OOP/MVC design principles with secure, role-based session authentication and a normalized MySQL schema.

Gym Social Media Platform - Java Spring Boot · React.js · MySQL

- Independently designed and built a full-stack social platform, implementing authentication, relational data modelling, and REST APIs for all client-server communication.

Library Management System - Java · MySQL

- Collaborated in a 5-person team, contributing to a secure authentication module and a request-management workflow via an admin dashboard.

PROFESSIONAL EXPERIENCE

Software Engineer - Full Stack

Jun 2024 - Present

Elevex Technologies Pvt Ltd | Laravel, Vue.js, MySQL

- Independently designed, developed, tested, and deployed 500+ RESTful APIs and full-stack feature modules, applying OOP/SOLID principles, design patterns, and MVC architecture.
- Wrote unit tests for new features and collaborated with QA on integration testing to maintain code quality and coverage.
- Conducted root cause analysis to resolve 800+ production incidents across live client environments, working independently on straightforward issues and escalating complex ones appropriately.
- Built and maintained a real-time system integration, developing APIs to synchronize data between two business platforms in production.
- Optimized MySQL queries and indexing, improving report-generation performance by 75% (12s -> under 3s).
- Used AI coding assistants to accelerate debugging, boilerplate generation, and documentation, consistently validating output before committing changes.
- Managed code through Git-based branching and version control, and contributed to CI/CD-driven delivery across development, QA, and production environments.
- Communicated with internal teams and client stakeholders to clarify requirements, and actively participated in Agile sprint ceremonies and planning.
- Mentored junior engineers on established development and support practices, and contributed to code review discussions to uphold quality standards.

Software Engineer Intern

Dec 2023 - May 2024

Ceylon Linux (Pvt) Ltd | Web application development & database work

- Built software modules for internal web applications using PHP, applying MVC principles to reporting dashboards and data entry features.
- Analyzed and optimized SQL queries across application modules, improving performance on production systems.
- Collaborated with senior engineers on debugging and root cause analysis, and participated in Git-based code reviews.
